Who am I

First Last

- Role — **Organization**
- PhD in Computer Science
- Research: LLM agents in Software Engineering

Previously at:

- **Company A** — area of work
- **Company B** — area of work

Agenda

1. Layouts
2. Blocks
3. Columns and Images
4. TikZ Diagrams
5. Metrics and Quotes
6. Tables and Code
7. Anti-patterns — what not to do

AI Assistance

This template includes a guide for AI assistants (Claude, Copilot, Cursor, Gemini, etc.).

AGENTS.md — at the project root

Machine-readable guide with layout rules, block patterns, column constraints, color palette, and common mistakes. Any AI assistant that reads project files will use it automatically.

Claude Code users

A dedicated skill is configured at `.claude/skills/`. It is invoked automatically when editing slides and includes interactive checklists (bio photo, section color strategy).

Layouts

Vertical Layout

Default layout for general content. Right sidebar with logo.

- Right sidebar (~20% of slide width)
- Dark text on light background
- `\textwidth` $\approx$ 80% of slide

When to use

Lists, blocks, tables, diagrams, body text. Any slide that does not require side-by-side columns.

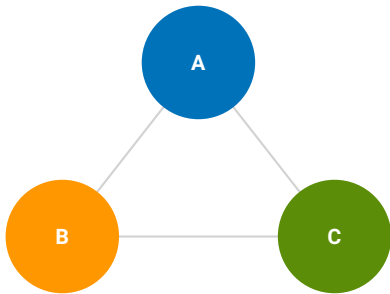

Horizontal Layout

Decorative bar at the bottom. Less vertical space available.

- Horizontal bar at the base
- Logo at the bottom-left corner
- Preferred for two-column content

When to use

Diagram or visual alongside descriptive text. Any side-by-side layout.

Blank Layout

Characteristics

- Solid background in `bgcolor`
- Text automatically white
- No sidebar or bottom bar
- Change color with `\setBGColor{}`

When to use

Emphasis slides with color: large metrics (`\stat`), impactful quotes, closing. Not for regular content.

Color Palette

UFGBLue #0072B9	DarkOrange #FF9800	DarkGreen #5B8D08	DarkPurple #8E24AA
INFBBlue #005CA1	LightOrange #FFC107	LightGreen #7ABC0C	LightPurple #BF53DB
Ocean #81C2EA	DarkGray #212121	LightGray #969696	VeryLightGray #F9F9F9

Mixing: UFGBLue!60, DarkOrange!80!black — works anywhere xcolor is accepted.

Section Slides with `\section`

With color

```
\section[DarkPurple]{Title}
```

Default (DarkGray)

```
\section{Title}
```

Color + short TOC title

```
\section[UFGBlue][Short]{Long Title}
```

Blocks

Block types

Block — general content

PrimaryColor border. Summaries, definitions, neutral notes.

Alert Block — warning or risk

DarkOrange border. Tensions, dangers, counterpoints.

Recommendation Block — suggestion

DarkGreen border. Best practices, actionable recommendations.

Examples block and inline highlight

Examples

Built-in Beamer environment. Green border with no extra setup. Title auto-translated via `babel`. Use only for real examples — not as a generic green block.

Text with **orange highlight** via `\alert{}`. Use sparingly to preserve impact.

Columns and Images

Symmetric columns – 0.5 + 0.5

Column A – advantages

- Positive item 1
- Positive item 2
- Positive item 3

Column B – costs

- Cost 1
- Cost 2
- **Hidden cost**

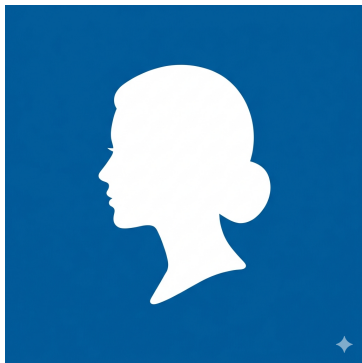

Asymmetric columns — 0.6 + 0.4 (text + image)

When to use 0.6 + 0.4

- Image or diagram needs breathing room
- Text side carries the narrative
- Heavier content on the left balances visually

Tip

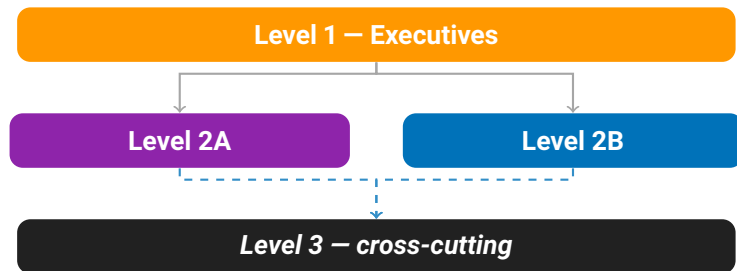

Keep image width to `0.9\textwidth` of its column to preserve padding.

TikZ Diagrams

Hierarchy diagram

Solid arrows = direct hierarchy. Dashed = secondary or implicit relation.

Metrics and Quotes

Metrics with \stat

73%

teams adopted generative
AI

12x

faster code generation

**15
days**

average adoption time

Quote with \quoteblock

“

AI redistributes who gets to create. That is real, it is positive, and there is no going back. What does not change is that creation produces artifacts that must be maintained, operated and evolved by people.

— Deuslirio Junior, 2026

Tables and Code

Table with booktabs

Tabela 1: Layout comparison

Layout	Visual marker	Typical use
vertical	Right sidebar	General content
horizontal	Bottom bar	Diagram + side text
blank	Solid background	Emphasis, closing
mainpoint	Solid bg + overlay	Section transition

Code with Istlisting

Listing 1: Redistributing access with AI

```
1 def apply_ai(team: list[str], tool: str) -> dict:
2     # redistributes access to creation across all roles
3     return {member: tool for member in team}
4
5 roles = ["dev", "pm", "designer", "exec"]
6 output = apply_ai(roles, "claude-code")
7 print(output) # everyone creates, responsibility remains
```

Anti-patterns — what not to do

[WRONG] Two columns in vertical layout

Problem

- Sidebar consumes 20% of width
- Columns compete with the sidebar decoration
- Content gets cramped

Correct

Use `\setLayout{horizontal}` for side-by-side blocks. Reserve vertical for single-column content.

[WRONG] Too much content in horizontal layout

Problem — horizontal has less vertical space

- First item with a longer description that wraps
- Second item with additional context provided
- Third item explaining something important
- Fourth item already pushing the limit
- Fifth item that clearly overflows the frame
- Sixth item overflows over the footer bar

Block A — first point

Explanation that takes two lines because someone thought more text meant more value.

Block B — second point

Another multi-line explanation adding even more vertical pressure to an already tight layout.

Block C — overlaps footer

Content overflows over the footer bar. Layout decorations sit behind — content always wins.

Block D — outside the frame

Thank you

Questions and suggestions are welcome
